

Literature Review

According to Edwin B. Flippo, (1979) “Recruitment is the process of searching the candidates for employment and stimulating them to apply for jobs in the organization”. “Recruitment refers to the process of attracting people with multidimensional skills and experiences that suits the present and future organizational strategies.” (Personnel & HRM, P. Subha Rao).

According to Leon C. Megginson (1985) Human Resources Planning is “an integrated approach to performing the planning aspects of the personnel function in order to have a sufficient supply of adequately developed and motivated people to perform the duties and tasks required to meet organizational objectives and satisfy the individual needs and goals of organizational members.”

P. Subba Rao (2004) in “Human Resource Management”²⁵ defines that human resource management means recruitment of people, developing their resource, utilising, maintaining and compensating their services in tune with the job and organisational requirements with a view to contribute to the goals of the organisations, individual and society.

(Cober et al., 2000), Online recruiting can also produce cost savings and higher applicant earnings. Companies have reported savings of 95% when changing from modern to online recruiting causes and discrete companies have generated as many as 10,000 applicants through their recruitment web sites to fill less than 1000 jobs.

According to Strohmeier (2007) “e-HRM is the planning, implementation and application of information technology for both networking and supporting at least two individual or collective actors in their shared performing of HR activities”.

W. Kaharuddin, S. S. Pangemanan, and F. S. Rumokoy (2018) in their study attempted to examine how employees perceive both traditional and modern hiring practices. Exploratory research has been used in this study to develop a deeper understanding of their perception. The findings of this study demonstrate that traditional hiring practices are more effective from the viewpoint of employees since they give them greater opportunities to land a position in the targeted organization.

U. C., and Irabor, I. E. (2017) explained how e-Recruitment is a new technology method for choosing one of a company's most important resources, namely its human resource. In the fiercely competitive job market, recruitment has grown in importance. The rise of the internet

has revolutionized conventional hiring practices. The newest trend, e-recruitment, has been implemented by both large and small organizations. Many businesses utilize e-recruitment to advertise job openings, take resumes online, and communicate with applicants via e-mail. The value-added services offered by the jobsites' cost effectiveness, speed, provision of customized solutions, aiding in the development of relationships with HR managers, and facilitation of brand growth are the primary success elements of e-recruitment.

A February 2022 survey conducted by the Society of Human Resources Management (HRM) found that 79% of employers use artificial intelligence (AI) and/or automation for recruitment and selection (R&S; Friedman, 2023).

Luke Strauss (2024) in their blog stated about various Applicant Tracker System and their working, pros and cons. This blog consists of ATS like BambooHR, Greenhouse, Zoho Recruit, Ashby etc.,
