PROJECTS

CRUD (using python)

This can manage the registered data and it also used for updating and deleting particular record.

GIT Link: [CRUD](#)

RO waste water reuse in society (using Arduino)

This project can reuse the waste water from the RO water purifier by seeing some parameter.

Covid 19 Report (Using Ui path)

It can generate an excel sheet from corresponding website and send to the mail we attached.

Face Detection and Recognition (Using OpenCV)

It can gather data from live camera and train it self then. By using trained data system can detect our face.
